Abstract (Basic): EP 80976 A

Aq. cosmetic compsns. having pH 3-8 contain at least (A) an aq. tenside system-soluble or micro-emulsifiable polymeric acrylic-based quat. ammonium salt having mol. wt. distribution 10 power 4 to 10 power 9, provided the mol. wt. of at least 5 (5-60) wt.% of the polymeric salt is 10 power 7 to 10 power 9, (B) a monomeric to oligomeric ammonium salt contg. 1-3 quat. N atoms and having mol. wt. max. 9000 and (C) a nonionic tenside, a tenside having intramolecular positive and negative charge and/or an anionic, opt. zwitter-ionic surfactant.

The salt (A) contains repeat structural units of formula

-CH₂-CA₁(-CO-D₁-E₁-NR₁R₂-QY₁)- (I)

and opt. in opt. sequence at least 1 of the repeat structural units having formula -CH₂-CA₂(CONH₂)- (Ia), -CH₂-CA₃G₁- (Ib) and -CH₂-CA₄G₂- (Ic) (where A₁, A₂, A₃ and A₄ each is H or Me; G₁ and G₂ differ from another and each is -CN, -COOH or -CO-D₂-E₂-NR₃R₄; D₁ and D₂ each is -O- or -NH-; E₁ and E₂ each is 1-4C alkylene opt. substd. by OH; R₁, R₂, R₃ and R₄ each is Me or Et; Q is alkyl, 1-4C hydroxyalkyl or benzyl

and Y1 is a halide-, 1-4C alkyl-sulphate or alkyl-phosphonate anion).
On using an anionic tenside as (C), (A) contains structural units
having formula (Ia) in addn. to (I) and the anionic tenside is reacted,
at least partly, with components (A) and (B) under ion exchange.

The compsns. are used in cosmetics, esp. hair-cosmetics. The
compsns. combine good washing- and conditioning effects on hair, e.g.
combing out when wet or dry, prevention of static electricity,
gloss-retention, vol. and fullness and hand.
